FLR-3A: Register of brandwise transactions (Maharashtra, FL-III licence). Format by Novota BEC, <https://novota.co/bec/>

How to read the figures:

- Quantities are written as bottles.pegs. 7.03 means 7 full bottles and 3 pegs of 30 ml. The digits after the point count pegs; they are not a decimal fraction.
- A 750 ml bottle holds 25 pegs, a 180 ml bottle 6, a 700 ml bottle 23 and a 500 ml bottle 16 (only whole pegs count).
- Wines count 150 ml glasses after the point: a 750 ml bottle holds 5 glasses, so 4.04 is 4 bottles and 4 glasses.
- Draught beer (kegs of 5 litres and up) is written in whole litres in one 1L column, with no decimals.
- For every brand and pack size: Opening + Receipt – Sale = Closing Balance. This period's closing is the next period's opening.
- No figure is ever negative. Leave a cell blank when nothing moved; write 0.00 in Closing Balance when a pack has run out.
- TP No is the transport pass (FL 1-A pass) the receipt came in on. Receipts are entered on the pass date.
- Add or remove pack-size columns to match what you stock.

The Sample sheet is an illustration with made-up brands. Check the current form prescribed by the State Excise Department before you file.
